

Kevin B. Doyle

Product Designer – Internal Tools & Developer Platforms

Richmond, VA (remote) | kbdoyle@gmail.com | kevinbdoyle.com | linkedin.com/in/kbdoyle

Product designer with 25+ years building tools for people who don't choose their software – employees, engineers, and internal teams who have no market alternative if the workflow is bad. Most recently I designed developer tools and knowledge systems for 3,000+ engineers at Fannie Mae. I design complex, data-heavy tools end to end and work close to the code – design systems, working prototypes, and sessions with engineers through ship. I know when to go deep on craft and when to ship the pragmatic version.

RECENT EXPERIENCE	CORE STRENGTHS
Fannie Mae Product Design Lead & Team Leader Enterprise Developer Experience (DevEx), Sept 2022 – Aug 2026 Designed internal tools and platforms used daily across a 3,000+ engineer organization – an Angular UI builder, a microservice catalog with cart-style customization, and the company's internal knowledge base. Owned interaction models and information architecture for systems where a confusing workflow becomes a tax every engineering team pays, repeatedly. - Designed DragOn, a drag-and-drop Angular UI builder for an org where over 90% of product teams had no designer. Dev teams across the org used it to onboard, share working concepts, and solve problems collaboratively. - Founded and ran Dev Insights, a developer productivity and voice-of-customer program that grew from 45 to 485 developer participants, and served as Product Owner delegate for the DX Developer Intelligence Platform behind it. Findings shaped CIO-level OKRs, roadmap priorities, and the feature priorities for our Backstage developer portal. - Built the Figma component library for our Backstage developer portal, and used it to mentor the design contractor on reusable components. - Product Owner delegate for Stack Overflow Enterprise, our internal knowledge-discovery tool: negotiated the contract and ran the engagement program. Activity grew 125%, saving an estimated 21,000+ developer-hours per quarter over two years. - Led the GitHub Copilot, Kiro and Codex pilot product assessments (with ~20 developers over two rounds). On the GitHub Copilot pilot, we added CSAT questions to the quarterly DX Snapshot survey; the results supported the decision to keep GitHub Copilot. - Designed the “shopping cart” UX and customization pattern library for Chassis CodeGen, the enterprise microservice standard, and wrote the guidelines that let teams make interface decisions on their own and bring them to Sprint Review ready for my approval. - Governed Figma/Angular design-system components and standards for consistency, usability, and accessibility across multiple product teams. - Founding member of the Enterprise Accessibility Council: presented at enterprise-wide awareness events and advised development teams on meeting WCAG standards.	Complex workflow and systems design Internal tools & developer platforms design Design systems (Figma to Angular and React) Prototyping & researching with AI tools (Figma, Claude, VS Code) Discovery & applied research Information architecture Accessibility (WCAG/508) Cross-functional partnership with engineering and product

PREVIOUS ROLES

CGI Federal | Consulting Director, Human-Centered Design SME User Experience Team, May 2015 – Sept 2022

Designed federal platforms where the agency is the only source – USPTO's open patent data and Medicare's physician search – plus the design system CGI's own designers built on.

- Joined the USPTO Open Data Initiative as design lead before scope or a dev team existed; built the product vision, wireframes, and IA, ran weekly working sessions, and presented biweekly to USPTO executive leadership. Shipped the MVP ahead of schedule. It became USPTO's Developer Hub, the agency's primary open data platform.
- Built CGI Federal's internal Design Pattern Library on Brad Frost's atomic design model – a Sketch, Adobe XD, and Figma component system used firm-wide by CGI's designers, with QA coordinated with frontend developers on implementation.
- Led UX strategy for Medicare.gov Physician Compare (CMS), the public search for Medicare-enrolled clinicians (now part of Care Compare), working with CMS to back design changes with documented research rationale.

Huge Inc | Experience Lead *Mar 2014 – Mar 2015*

- Led design of the AXA Vantage agent portal, including the workflows and dashboards its financial and insurance agents worked in.
- Led small teams of 2-4 designers directly on consulting project work. Clients included Fannie Mae, AXA, Credit Suisse, and Stantec.

LivingSocial | Experience Lead *Jun 2012 – Mar 2014*

- Designed Rearview, an internal monitoring tool engineers used to see system health during outages and act before failures cascaded.
- Designed Photomanager, an internal tool that connected two teams: photographers uploaded, organized, and shared their shoots, and marketing searched, selected, and placed images on deals and business profiles, cutting processing time 50%+.

NavigationArts, CCPace, Axiaware, Three Pillar Global, Nextel, AOL 2000 – 2012

- At Axiaware, redesigned Navy Federal Credit Union's online car loan application: \$22M+ in revenue within 8 months of launch, a 32x return on development cost.
- At Three Pillar Global, led UX and design direction for a PBS iPad app that won a Webby Award.
- UX and product design across financial, nonprofit, and public-sector products, focused on accessibility, trust, and multi-device responsiveness.
